

N.T.S.™ jr (jr edition, 11 month old cranium)

N.T.S. jr is a scientifically normative model of an 11 month old cranium to be used for intra-operative templating for cranial vault procedures. This highly durable, re-sterilizable model is made of surgical grade titanium alloy (Ti6Al4V). The normative model was developed by researchers at The Hospital for Sick Children (Toronto, Ontario, Canada) and is available exclusively through 3D Systems, Inc.

Templating System
(jr edition, 11 month old cranium)

N.T.S.™ ♂ (adult male edition)

N.T.S. ♂ is a reliable and reusable solution for intra-operative templating to aid in the treatment of severe maxillofacial trauma. A combination of Steiner and COGS analyses were used in the development of the normative skull. This highly durable, re-sterilizable model is made of surgical grade titanium alloy (Ti6Al4V). N.T.S. ♂ was developed in conjunction with Brent DeLong, DDS and Steven Press, DDS and is available exclusively through 3D Systems, Inc.
