3D Systems and Amann Girrbach Join Forces to Expand Ceramill® Digital Dental Workflow with NextDent™ 3D Printing

- Integrated single-source solution will enable dental labs and clinics to produce dental devices faster and more economically with lower total cost of operation

ROCK HILL, South Carolina and KOBLACH, Austria, October 22, 2018 – [3D Systems](#)

(NYSE: DDD), the originator of 3D printing, and Amann Girrbach, a leading supplier of digital dental prosthetic solutions, today announced that Amann Girrbach will be integrating 3D Systems' [NextDent™ 5100](#) 3D printing solution into its Ceramill® System digital dental workflow. This will allow the Austrian-based company, which has partners in over 90 countries worldwide, to offer its thousands of dental lab customers an expanded integrated solution that combines dental-optimized 3D printing with its suite of CAD/CAM software, digital milling and testing equipment.

Powered by 3D Systems' proprietary Figure 4™ technology, NextDent 5100 is a complete 3D printing dental solution that produces precision trays, models, surgical guides, dentures, orthodontic splints, crowns and bridges at print speeds up to 4x faster and at significantly reduced cost compared to competitive systems. It supports the industry's most extensive dental materials portfolio with 30 unique biocompatible and CE-certified NextDent materials available to cover a broad range of dental applications for lab managers, dental technicians, dental prosthetic technicians and clinical prosthodontists and orthodontists. 3D Systems [3D Sprint™](#) software

provides a single interface for file preparation, editing, printing and management, and is now fully integrated with the Ceramill CAD/CAM workflow.

"With the addition of 3D Systems' NextDent 5100 3D printing to our Ceramill System, we can offer our customers a more feature-rich digital dental workflow that will make them more competitive and efficient," said Christian Ermer, Head of Product Management at Amann Girrbach. Amann Girrbach. "For example, a dental model is an important part of the restoration process and now with the Next Dent 5100 our customers can print their own models cost-effectively without having to move outside the Ceramill workflow. The NextDent 5100 can also produce bridges, crowns and even the full denture which dramatically lowers production costs and reduces turnaround time. This is certainly a win-win for our customers and their dental patients."

"Additive manufacturing is transforming the way dental applications are planned, produced and delivered, due in large part to the wide variety of NextDent materials that are regulatory approved and clinically evaluated. We are pleased that Amann Girrbach, an industry leader in dental CAD/CAM solutions, is adopting our NextDent 5100 as the additive component in the Ceramill workflow," said Rik Jacobs, vice president, general manager, dental, 3D Systems. "Amann Girrbach's customers are getting a trusted connection – a complete fast and accurate dental 3D printing solution that will work seamlessly with their existing Ceramill equipment and processes. This new partnership with Amann Girrbach is an important milestone in our strategy to redefine digital dentistry and demonstrate our ability to optimize production workflows."

Forward-Looking Statements

Certain statements made in this release that are not statements of historical or current facts are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the actual results, performance or achievements of the company to be materially different from historical results or from any future results or projections expressed or implied by such forward-looking statements. In many cases, forward looking statements can be identified by terms such as "believes," "belief," "expects," "may," "will," "estimates," "intends," "anticipates" or "plans" or the negative of these terms or other comparable terminology.

Forward-looking statements are based upon management's beliefs, assumptions and current expectations and may include comments as to the company's beliefs and expectations as to

future events and trends affecting its business and are necessarily subject to uncertainties, many of which are outside the control of the company. The factors described under the headings "Forward-Looking Statements" and "Risk Factors" in the company's periodic filings with the Securities and Exchange Commission, as well as other factors, could cause actual results to differ materially from those reflected or predicted in forward-looking statements. Although management believes that the expectations reflected in the forward-looking statements are reasonable, forward-looking statements are not, and should not be relied upon as a guarantee of future performance or results, nor will they necessarily prove to be accurate indications of the times at which such performance or results will be achieved. The forward-looking statements included are made only as the date of the statement. 3D Systems undertakes no obligation to update or review any forward-looking statements made by management or on its behalf, whether as a result of future developments, subsequent events or circumstances or otherwise.

About Amann Girrbach

Amann Girrbach, one of the leading innovators and full-service provider in digital dental prosthetics, is championing the cause to enable a complete in-house process chain for its customers. As a result, labs profit from perfect quality frameworks, but also from efficiently arranged workflows, reproducibility and dependable processing and a sophisticated CAD/CAM material range. Thus, the Ceramill CAD/CAM system is one of the most versatile and technically adept on the market which incorporates 35 years' experience and know-how in CAD/CAM. The high degree of inhouse production spanning the product idea up to final assembly allows Amann Girrbach to adapt its systems to economic and dental-specific requirements right from scratch. About 3D Systems

3D Systems is the originator of 3D printing and an innovator of future 3D solutions. It has spent its 30-year history enabling professionals and companies to optimize their designs, transform their workflows, bring groundbreaking products to market and drive new business models. This is achieved with the Company's best of breed digital manufacturing ecosystem. It's comprised of plastic and metal 3D printers, print materials, on demand manufacturing services and end-to-end manufacturing software solutions. Combinations of these products and services address a variety of advanced applications- ranging from Aerospace, Automotive, and Consumer Goods to Medical, Dental, and Jewelry. For example, 3D Systems' precision healthcare capabilities include simulation, Virtual Surgical Planning, and printing of medical and dental devices as well as patient-specific surgical instruments.
