

3D Systems Leuven is looking for a motivated

JUNIOR QUALITY ENGINEER (M/F)

ABOUT 3D Systems Leuven

3D Systems Leuven, formerly LayerWise, is a dynamic and leading enterprise, specialized in 3D Printing of metal components. 3D Systems Leuven is not only a technology developer but also a technology user. This makes us a strong innovation partner for clients in the industrial, medical and aerospace sector.

With this technology, we build up material in layers using a high intensity laser until it becomes a solid product. Unlike conventional production techniques, this one does not render any material loss, nor does it require any tooling. It does however, enable the designers to manufacture very complex geometries which are not producible using the traditional techniques.

3D Systems group is a world leader in 3D printing technology.

JOB DESCRIPTION

Our site in Leuven Belgium is looking for a Junior Quality Engineer to support the manufacturing of products in the high tech, aerospace and healthcare industries. The major activity will be following up of complaints, capa's, internal non conformities and supplier non conformities.

RESPONSIBILITIES

- Managing the complaint handling process
- Collaboration with project teams as a contributing member by providing quality and process engineering support in the development of new products and processes, and continuously improving 3D Systems' products
- Assisting project teams on compliance with design control requirements per FDA QSR, European MDD, ISO 13485/9001 and other applicable ISO/EN standards
- Application development of new technologies to enhance the capabilities of 3D Systems'
- Contributing to the development and execution of verification & validation plans, testing, and generation of test protocols and reports
- Development and contribution to the risk management process
- Development and contribution of process controls and planning
- Participating in the compilation and review of technical documentation for both domestic and international regulatory submissions
- Facilitating and performing internal and supplier QA audits as required
- Participating in the execution, maintenance and improvement of the Quality Management System.
- Analyzing reports and returned products and recommending corrective/preventive actions (CAPAs)
- Leading process improvement initiatives of cross functional teams to address business and quality manufacturing issues

PROFILE

- Preferably a degree in engineering
- A first work experience in regulated, cGMP environment such as medical device, pharmaceutical or food manufacture is welcome but not a must
- Analytical mind-set and motivated by implementing improvements
- You can work independently within the context of a collaborative team
- You are eager to learn about all aspects of Advanced Manufacturing
- Fluent in English

WE OFFER

- A challenging job in a young and dynamic team
- A competitive salary and additional non-statutory benefits
- Career opportunities in a global company with exponential growth
